

NC Violent Death Reporting System

CHILD VIOLENT DEATH IN NORTH CAROLINA, 2019

The North Carolina Violent Death Reporting System (NC-VDRS) is a CDC-funded statewide surveillance system that collects detailed information on violent deaths that occur in North Carolina including: homicide, suicide, unintentional firearm deaths, legal intervention, and deaths of undetermined intent. NC-VDRS triangulates information from death certificates, medical examiner reports, and law enforcement reports to understand and aid in the prevention of violent deaths. For more information, please visit <https://www.injuryfreenc.ncdhhs.gov/About/ncVDRS.htm>.

Manner of Child Violent Deaths (ages 0-17): NC-VDRS, 2019

- In 2019, there were a total of 107 violent deaths among North Carolina children ages 0-17.
- There were 64 homicides (59.8%), 35 suicides (32.7%), two unintentional firearm deaths (1.9%), zero deaths resulting from legal intervention (0.0%), and six deaths in which the Medical Examiner’s Office could not determine the manner of death (5.6%).
- Most of the child victims were male (74.8%).

Percent of Child Violent Deaths by Race/Ethnicity*: NC-VDRS, 2019

• Non-Hispanic (NH) Black victims accounted for the greatest percent of child violent deaths (53.3%), followed by NH white victims (29.0%).

• Rates of child violent death were highest among Black victims (10.2 deaths per 100,000 population) followed by Hispanic and white victims (3.9 and 2.5 per 100,000, respectively).

*Other includes non-Hispanic Asian (N=0) and American Indian (N=4) victims.

Child Violent Death Rates* by Age: NC-VDRS,

- The highest child violent death rate occurred among children ages less than one (13.5 deaths per 100,000 population).

- Children 15-17 years of age had the second highest rate of violent deaths (12.9 deaths per 100,000 population).

Method of Child Violent Death: NC-VDRS, 2019

- Firearms were involved in 49.5% of all child violent deaths (n=53). This percentage was propelled by the high number of firearm related deaths among children ages 15-17 (n=34).

- Hanging was the second most common cause of violent death among children (22.4%).

- Personal weapons (fists, feet, and hands) were the most common causes of death among children under the age of five, while firearms were the most common weapon among children ages 5-9, 10-14 and 15-17.

* Other includes: non-powder gun, blunt instrument, unknown, fall, fire or burns, intentional neglect, (e.g., starving a baby or oneself), and other transport vehicle, (e.g., trains, planes, boats)
